Thank you for purchasing my asset!!!

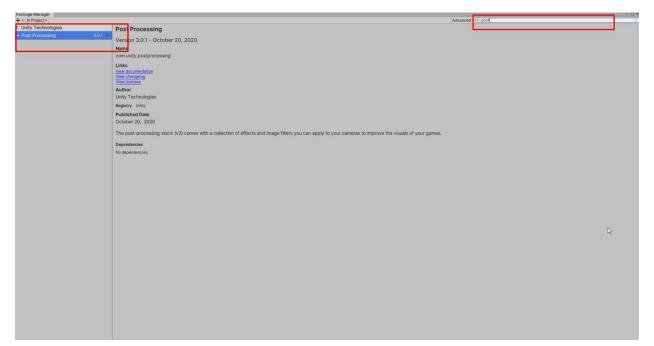

Your feedback motivates me to create new assets and modify them.

1) Use this tool. It will allow you to quickly connect modules. For internal modules, use "Move" 0.1

2) In the package manager, download these tools. They will allow you to use flexibly work with terrain and configure post processing

3) You can apply any material from the screenshot to all modules (except for the modules circled in red). In general, if the Wall_01 or Wall_02 material is applied to the model, you can apply any other material from the screenshot.
